

RTX and ACE: the DECT market is steadily growing in Europe and North America

ACE solution and RTX predict that the DECT application market is highly potential in 2013 leading to increase the demand of DECT test. Due to this, ACE and RTX are going to cultivate the DECT test market especially in the Greater China. As result of the increase of VoIP and HD voice service in European and North American market, the shipment of DECT Home gateway might climb to 25 million in 2015.

Due to the European operators pushing high-quality voice services, DECT and CAT-iq have been widely integrated into many home gateways. After European market, the growth opportunities can be seen in the North American area. The DECT/CAT-iq gateway shipment is predicted to increase at approximate 5 million in Europe and 2 million in North America this year.

In addition to the growth of DECT gateway, the attach arte of packages with a DECT handset will increase while HD voice is growing. Particularly for CPE which ships with a handset, it is predicts that the average will be 1.9 in North America.

Moreover, the next generation technology, DECT ULE (Ultra Low Energy), is going to the application period which will be widely used in home automation, smart meter and energy management system. Therefore, this new technology could be one of the dynamic factors of the DECT test market.

RTX PTE Program Manager -Per O. Nielsen claimed that RTX is the only provider in the DECT test market. The latest test platform-RTX2012 HS is tailor-made for the DECT/DECT 6.0/CAT-iq, Japan DECT and ULE market. As a result it has never been faster and more efficient to test due to the utilization of parallel measurement of most RF parameters. In Taiwan, there is a number of successful cases which have been adopted RTX2012 HS into their production line. As the distributor in the Great China area, ACE solution will persistently offer local service and technical support, and providing RF test integrated solution.
