

The most compact & contactless spy on the market

The MP 007

Micropross put its long time expertise in the design of innovative test equipment inside the MP 007.

The MP 007 is a portable spy tool, able to monitor transaction that involve contact and contactless smartcards, banking terminals, NFC devices, e-passports, on site.

Battery powered, autonomous, and fitting in the palm of one's hand, the MP 007 is the most precious companion of any engineer who has to perform debugging tasks in challenging conditions. This tool is light, compact, fits in all laptop bags, and can be placed in any carry-on luggage.

With the MP 007, best things definitely come in small packages. Able to spy simultaneously contact (ISO 7816, SWP/HCI) and contactless (ISO 14443, ISO 15693, FeliCa, Mifare, ...) technologies, this tool provides never seen before convenience in its usage.

Using either the market acclaimed desktop version of MPManager, or its brand new cutting edge touchscreen version, customers will (not only) access to the content of the frames, but will also enjoy a business oriented analysis of those frames, using the numerous available decoders.

Customers looking for more than just a passive spy tool will be able to benefit from the smartcard simulation feature of the MP 007, to perform application testing, or simply perform a basic on-side « go/no go » inspection.

Because the market is global, because development teams are scattered around the globe, the MP 007 has been designed to be compatible with the thousands of Micropross test systems installed in the world. Capturing an exchange in Shanghai, and get it analyzed and replayed automatically in California becomes as easy as 1+1.

Perfect for the banking, NFC, e-identification, RFID markets, the MP 007 elegantly meets the challenge raised by the mass deployment of the NFC technology, and smart objects in general.
