Taipei, Taiwan / San Jose, CA, United States – May 10, 2024 – ACE Solution is an expert in software and hardware integration, while LitePoint is focused on delivering the most technologically advanced wireless testing solutions available. Specifically designed to keep pace with evolving wireless technologies, challenging device environments, and pressing market demands, LitePoint's solutions are at the forefront of innovation in the industry. John Lukez visited ACE Solution to provide cooperation and market insights in the wireless testing field.

John Lukez has recently taken the role as the President of LitePoint, having overseen marketing and applications teams since joining in 2008. With an Electrical and Computer Engineering degree from Ohio State University, John's professional career has been centered around wireless design and testing, spanning R&D, semiconductor high-volume manufacturing tests, and system-level characterization.

In wireless communication, the hottest technologies include Wi-Fi 7, BT channel sounding, and maybe UWB 802.15.4ab, all technologies covered by LitePoint. Wireless communication is crucial for connecting various intelligent devices to the cloud and the internet to accelerate AI enablement. LitePoint focuses on helping customers test their communication links, including Wi-Fi, Bluetooth®, and 5G, to ensure they work robustly and correctly.

The excitement of 5G is shifting from the basic capability in devices, which is widely available, to how next generation 5G networks will be architected. 5G O-RAN promises to bring 5G networks to every point, including buildings and may bring positive changes to networks in the enterprise environment. AI depends on data; and wireless communication is vital in transferring data between devices and the data center. LitePoint is exploring ways AI can help customers in measurement technologies, including using AI to test data for trends or predictions before problems occur.

LitePoint offers a range of superior testers, boasting the most comprehensive chipset coverage, user-friendly setup, easy to use test programs, and close-to-factory service. According to John, "Trust is a key factor in LitePoint's customer relationship." The enduring partnership between LitePoint and ACE Solution has built strong trust among customers, who rely on both companies to address their needs and offer innovative solutions. LitePoint focuses on solutions to customers' problems rather than just focusing on technology. John Lukez emphasizes, "The partnership between LitePoint and ACE, which has lasted for more than 20 years, helps provide solutions to customers. Technology is essential but only valuable if it can solve problems. The value of LitePoint and ACE working together is to solve customers' problems, which is the primary focus for LitePoint." By coordinating manufacturing operations in Southeast Asia and setting up support teams in those locations to support customers worldwide, LitePoint and ACE focus on high-performance and cost-effective test solutions to enable consumer electronics products to hit the market.

ACE Solution's Business Development Manager, Peter Lee, highlights, "Vietnam as a key location for providing services and bringing LitePoint's value to the country." ACE's General Manager, Frank Chang, emphasizes "the importance of working with LitePoint to service customers globally and drive ecosystem development in the industry." LitePoint focuses on enabling cost-effective testing solutions customers need to produce consumer electronics products successfully. The long-term partnership between LitePoint and ACE ensures that customers receive the best services no matter where they are located.

About ACE Solution

Established in 2000, ACE Solution (<https://www.acesolution.com.tw/en/>) is headquartered in Hsinchu City, Taiwan, with branch offices strategically located in Suzhou and Shenzhen, China. Our company is dedicated to delivering tailored test solutions that cater to the specific requirements of our customers in the field of electrical components, devices, and system manufacturing. Furthermore, we collaborate with our esteemed partners to provide comprehensive technology solutions. At ACE Solution, we specialize in RF, mmWave, and terahertz technologies, boasting an accomplished team of technical experts who offer unparalleled support. Our commitment to professionalism, innovation, and versatility enables us to offer cutting-edge integrated techniques and solutions. By leveraging our expertise, we empower our clients to overcome technological challenges and achieve their desired outcomes efficiently and effectively.

About LITEPOINT

LitePoint is the leading provider of test solutions for the world's leading manufacturers of wireless modules and consumer electronics, including smart phones, tablets, and PCs. We are a Silicon Valley company founded in 2000. Our products have been used to optimize and verify the operation of over 2 billion wireless devices. Our mission is to create wireless test solutions that are ready to test the chips and technologies you're testing...out of the box. This enables LitePoint to be first with test technologies. So when you're ready to implement new wireless technologies, we're ready to help you test them.
